Real Time Security Score

Python Code:

```
import re

def calculate_real_time_score(password):
length = len(password)

# Check variety
has_upper = bool(re.search(r'[A-Z]', password))
has_lower = bool(re.search(r'[a-z]', password))
has_digit = bool(re.search(r'\d', password))
has_special = bool(re.search(r'[!@#$%^&*(),.?":{}|<>]', password))

# Scoring Logic
score = 0
if length >= 8: score += 40
if has_upper: score += 15
if has_lower: score += 15
if has_digit: score += 15
if has_special: score += 15

# Cap score at 100
return min(score, 100)

print("--- Real-Time Security Score Calculator ---")
while True:
pwd = input("\nEnter password to test (or 'q' to quit): ")
if pwd.lower() == 'q':
break

score = calculate_real_time_score(pwd)

if score >= 80:
result = "Strong"
elif score >= 50:
result = "Moderate"
else:
result = "Weak"

print(f"Current Security Score: {score}/100 | Status: {result}")
```
